About Me

Third-year computer engineering student at ESPRIT, with an initial background in mechanical engineering. Combining scientific rigor, project methodology, and passion for digital innovation. Curious and adaptable, I aim to solve real-world problems and deliver full digital project implementations from concept to deployment.

Technical Skills

Languages: Java (Spring Boot), C#, Python, JavaScript, TypeScript, HTML/CSS.

Frameworks and Tools: Angular, React, Symfony, .NET, Flutter/FlutterFlow, RabbitMQ, Docker, Git, RESTful APIs, NLP (AI), NLM, CI/CD, Agile methods (Scrum, Kanban).

Databases: MySQL, MongoDB, PostgreSQL, Oracle.

APIs and Integrations: Outlook / Google Calendar API.

Professional Experience

2025: IT Department, ESPRIT, El Ghazela, Tunisia — Engineering Internship

Developed and integrated fullstack modules for intelligent scheduling management (Spring Boot for backend, React for frontend, MySQL for database).

Automated event imports from Google Calendar and optimized resource scheduling.

Implemented notification management and automated mailing using RESTful APIs.

2024: Tunisair, Tunis — Web Development Internship

Built an inventory management application for tracking spare parts.

Developed dynamic dashboards and smart alert systems for stock management (Spring Boot backend, Angular frontend, MySQL database).

2023: NP Tunisia, Mghira — Final Mechanical Design and Quality Project

Implemented quality control tools and performed operational process analysis.

Education

2023–Present: Computer Engineering Program, ESPRIT, El Ghazela, Tunisia

2020–2023: Bachelor in Mechanical Engineering, ISET Radès, Radès, Tunisia

Projects

Automated ISO 9001 Management System:

(Awarded Best Project of the Year)

Developed a collaborative web platform to manage ISO 9001 compliance in companies, using Spring Boot (backend), Angular (frontend), MySQL (database), and Python NLP algorithms for profile matching and Google synchronization.

Gym Management System:

Developed a Symfony-based platform for managing memberships and personalized reservations. Improved subscription tracking, automated activity planning, and access security with reporting features.

Donation Management Desktop App:

Built a C/Glade Linux-based interface for centralized donation tracking and resource traceability. Enhanced usability for operators and automated collection statistics generation.

Restaurant Mobile App:

Integrated a cross-platform Flutter solution for digital menus and order management. Deployed on Android and iOS with customer notifications and adaptive multi-user interface.
